

# B01 MODULE QA REPORT

Engineering SQL Transition | Course 2B DA-to-DE Bridge | INTERNAL QA RC1 | 10 September 2026

## Verdict

**PASS at artifact/static QA level.** Course 2B is not FINAL; live PostgreSQL and integrated B01-B06/Mentor QA remain open.

| Canonical lessons / structure | 8/8; all 16 teaching stages present                       |
|-------------------------------|-----------------------------------------------------------|
| Practice / review             | 8/8 matched; attempt-first; changed retry; append-only    |
| Gate topology                 | A normal; B/C sealed; explicit reassignment only          |
| PDF set                       | 20p learner; 10p review; 1p Start; 3 x 1p Gate reviews    |
| Sources                       | 14 embedded links registered; external media required = 0 |
| Automated structural QA       | 99/99 PASS                                                |
| Archive                       | Manifest + SHA generated; ZIP CRC PASS                    |

## Curriculum + assessment decision

The frozen 12-lesson Advanced SQL baseline is cleanly rebuilt into 8 engineering-transition lessons. C1 repetition is compressed while grain/cardinality contracts, inspectable stages, deterministic windows, explicit time/business rules, quality diagnostics, independent reconciliation, EXPLAIN/index awareness and maintainable handoff remain assessed. Gate A/B/C keep distinct Retail Orders / Support Tickets / Subscription Billing cases; protected answers are physically separate.

## Source/video audit

PostgreSQL 18 documentation is the dialect authority. The preserved Alex SQL class remains visual refresher support. The optional EXPLAIN video is non-required; it was not independently rediscovered in this QA pass, so no mastery or Gate depends on it. Official PostgreSQL EXPLAIN documentation + the local lesson are the fallback and authority.

## Corrections made during QA

The B/C protected-review routing text was regenerated so an assigned Gate B or C has variant-correct completion behavior; C failure records a blocker rather than inventing an automatic Gate D. The learner-book pagination repair removed the earlier orphan lesson-tail page, and this QA report itself was compressed to avoid a mostly-empty second page.

## Render/file result

Primary PDFs are searchable, unencrypted and rendered at 200 DPI. No known clipping, overlap, broken glyph, zero-byte file, duplicate-content hash group, missing route artifact or placeholder remains. Current B01 automated structural controls: **99/99 PASS**.

## Open blockers before Course 2B release

Live PostgreSQL execution is not available in the current environment and is not claimed. B02-B06 must still be rebuilt against the frozen 38-lesson fast-track registry. The common five-course Mentor shell, responsive/PWA/backup-restore tests, whole-course Gate/capstone simulation and C3-entry parity are deferred until learner-facing routes stabilize.

## Promotion rule

**B01 is the current internal rebuild candidate only.** Any later content/route change requires fresh render, manifest/hash and QA evidence.
