

B02 Gate A Review - Logistics Shipments

PROTECTED - open only after matching Gate attempt is saved

Objective fixture controls

Raw rows: 120 | Valid numeric rows: 119 | Malformed rows: 1 | Master rows/unique: 31/30 | Duplicate key: C013 | Control total: 86090.00

Critical failures

- Silent coercion/drop/dedupe that hides the injected defect.
- Merge before proving master-key uniqueness.
- Critical validation FAIL but trusted output still published.
- No failure/recovery evidence or unsafe second-run duplication.
- Cannot explain input/output grain, validation or rerun behavior.

Competency decision

Score each competency 0-4. Core engineering controls must be ≥ 3 , objective fixture controls must reconcile, and no critical failure may remain unresolved. A percentage alone cannot pass the Gate.

Route after review

Protected route

PASS: B02 ends; continue only when course route moves to B03. FAIL/unstable: targeted repair. Gate B remains sealed until explicit full-retest assignment.
