

B02 Protected Practice Review

Open a lesson review only after its matching attempt is saved. No paste-ready solutions.

Protection rule

A review diagnoses reasoning; it does not replace your attempt. After review, close it and complete the changed retry without copying a finished answer.

Review B02-L01 - From notebook task to reusable script contract

Strong work demonstrates

Clean-start script with explicit entry point/paths; no notebook-state dependency.

Inspect your saved attempt

- Input/output grain or file contract is explicit.
- Validation can catch the exact named failure.
- Critical failed check prevents trusted publish.
- No source/master defect is silently erased.
- Clean restart/rerun evidence exists where relevant.

Changed retry - review closed

Fresh transfer

Use a different monthly file and output root; prove clean restart.

Repair rule

Repair only the weak competency. Keep the failed attempt in history. A corrected answer copied from this review is not mastery evidence.

Review B02-L02 - Functions, modules and decomposition for repeatable work

Strong work demonstrates

Functions have coherent contracts; schema validation happens before downstream work.

Inspect your saved attempt

- Input/output grain or file contract is explicit.
- Validation can catch the exact named failure.
- Critical failed check prevents trusted publish.
- No source/master defect is silently erased.
- Clean restart/rerun evidence exists where relevant.

Changed retry - review closed

Fresh transfer

Add a fresh required column rule and isolate its failure.

Repair rule

Repair only the weak competency. Keep the failed attempt in history. A corrected answer copied from this review is not mastery evidence.

Review B02-L03 - Deterministic file discovery and multi-file batches

Strong work demonstrates

Sorted file discovery, source_file lineage and per-file/combined reconciliation.

Inspect your saved attempt

- Input/output grain or file contract is explicit.
- Validation can catch the exact named failure.
- Critical failed check prevents trusted publish.
- No source/master defect is silently erased.
- Clean restart/rerun evidence exists where relevant.

Changed retry - review closed

Fresh transfer

Change folder composition and include a nonmatching CSV; prove selection contract.

Repair rule

Repair only the weak competency. Keep the failed attempt in history. A corrected answer copied from this review is not mastery evidence.

Review B02-L04 - pandas merge and validation contracts for pipelines

Strong work demonstrates

Duplicate master key detected before merge; many_to_one contract enforced; no arbitrary dedupe.

Inspect your saved attempt

- Input/output grain or file contract is explicit.
- Validation can catch the exact named failure.
- Critical failed check prevents trusted publish.
- No source/master defect is silently erased.
- Clean restart/rerun evidence exists where relevant.

Changed retry - review closed

Fresh transfer

Use a fresh duplicate key + unmatched fact key in a tiny in-memory case.

Repair rule

Repair only the weak competency. Keep the failed attempt in history. A corrected answer copied from this review is not mastery evidence.

Review B02-L05 - CSV, JSON and Excel interfaces with explicit parsing rules

Strong work demonstrates

Format/grain rules explicit; nested JSON reconciled; template/source immutable; output read-back where executed.

Inspect your saved attempt

- Input/output grain or file contract is explicit.
- Validation can catch the exact named failure.
- Critical failed check prevents trusted publish.
- No source/master defect is silently erased.
- Clean restart/rerun evidence exists where relevant.

Changed retry - review closed

Fresh transfer

Remove one optional nested JSON field while preserving item-grain reconciliation.

Repair rule

Repair only the weak competency. Keep the failed attempt in history. A corrected answer copied from this review is not mastery evidence.

Review B02-L06 - HTTP API basics for data acquisition

Strong work demonstrates

Offline fixture valid; HTTP wrapper has timeout/status checking; network failure cannot become fake success.

Inspect your saved attempt

- Input/output grain or file contract is explicit.
- Validation can catch the exact named failure.
- Critical failed check prevents trusted publish.
- No source/master defect is silently erased.
- Clean restart/rerun evidence exists where relevant.

Changed retry - review closed

Fresh transfer

Switch local fixture source/config without rewriting the validation function.

Repair rule

Repair only the weak competency. Keep the failed attempt in history. A corrected answer copied from this review is not mastery evidence.

Review B02-L07 - Error handling, failure classification and containment

Strong work demonstrates

Specific/contextual failure; critical bad data blocks publish or is explicitly quarantined.

Inspect your saved attempt

- Input/output grain or file contract is explicit.
- Validation can catch the exact named failure.
- Critical failed check prevents trusted publish.
- No source/master defect is silently erased.
- Clean restart/rerun evidence exists where relevant.

Changed retry - review closed

Fresh transfer

Inject invalid discount_pct >1 and classify as business-quality rather than parse failure.

Repair rule

Repair only the weak competency. Keep the failed attempt in history. A corrected answer copied from this review is not mastery evidence.

Review B02-L08 - Logging, run evidence and validation gates

Strong work demonstrates

Run log + structured validation evidence; operational and data-quality success distinguished.

Inspect your saved attempt

- Input/output grain or file contract is explicit.
- Validation can catch the exact named failure.
- Critical failed check prevents trusted publish.
- No source/master defect is silently erased.
- Clean restart/rerun evidence exists where relevant.

Changed retry - review closed

Fresh transfer

Add one fresh critical schema check and show FAIL in validation JSON + output block.

Repair rule

Repair only the weak competency. Keep the failed attempt in history. A corrected answer copied from this review is not mastery evidence.

Review B02-L09 - Recurring batch execution and safe rerun reasoning

Strong work demonstrates

Unchanged rerun does not accumulate duplicate business rows; manifest/source hashes make behavior inspectable.

Inspect your saved attempt

- Input/output grain or file contract is explicit.
- Validation can catch the exact named failure.
- Critical failed check prevents trusted publish.
- No source/master defect is silently erased.
- Clean restart/rerun evidence exists where relevant.

Changed retry - review closed

Fresh transfer

Force a failed validation on second run and prove previous good business output stays intact.

Repair rule

Repair only the weak competency. Keep the failed attempt in history. A corrected answer copied from this review is not mastery evidence.

Review B02-L10 - Build and defend a small reproducible batch pipeline

Strong work demonstrates

End-to-end pipeline demonstrates failure block, good-path run, validations, rerun safety and handoff defense.

Inspect your saved attempt

- Input/output grain or file contract is explicit.
- Validation can catch the exact named failure.
- Critical failed check prevents trusted publish.
- No source/master defect is silently erased.
- Clean restart/rerun evidence exists where relevant.

Changed retry - review closed

Fresh transfer

Rebuild same architecture on a fresh two-file mini-batch and defend it with review closed.

Repair rule

Repair only the weak competency. Keep the failed attempt in history. A corrected answer copied from this review is not mastery evidence.
