

B03 Gate B Protected Review — Education Enrollment

Open only after the matching genuine Gate attempt is saved.

Routing

Gate B exists only after explicit full-retest assignment following Gate A repair. A weak/unstable B routes to targeted repair; Gate C remains sealed until explicitly assigned.

Objective raw controls

- students 30
- courses 8
- enrollments 60
- attendance events 180
- assessments 90
- student-program memberships 35
- completed enrollments 45
- assessment score total 6,770

Competency check

- Business process + fact grains are explicit and consistent.
- Dimension keys/cardinalities and any bridge membership are defensible.
- Different-grain facts/date roles are handled without silent fan-out.
- Raw-to-model reconciliation passes and unresolved quality issues are visible.
- Engineering handoff + rejected alternative + short defense are present.

Critical failures

Mixed grain, unresolved fan-out, arbitrary many-to-many/DISTINCT repair, failed reconciliation hidden, or model cannot be explained/reproduced.

After review

Close the review. Complete only the targeted repair assigned. A targeted repair is not itself a fresh full Gate retest.
