

B03 Engineering Data Modeling - Module QA RC1

C2B DA-to-DE Bridge | 10 September 2026 | INTERNAL QA - not Course 2B FINAL

Verdict

PASS at module Internal-QA level. Structural/runtime controls: **177/177**. Artifact-tool workbook controls: **19/19**. Known live-tool boundaries remain explicit.

Canonical rebuild result

7 baseline lessons -> 4 engineering-transition lessons. C1 Power BI modeling is not retaught. The four targets are: dimensional grain contract; key/cardinality + legitimate bridge; multiple facts/date roles/conformed dimensions; reconciliation + engineer handoff.

Freshness correction

Old Mini-Lab rejected

The baseline Parcel Delivery Mini-Lab failed freshness: 8 of 9 sheets were semantically identical to the main practice workbook; only START_HERE differed. RC1 replaces it with **FreshRoute Food Delivery**, a different dataset/domain with 40 deliveries, 120 events, 8 week-city targets, 18 courier-skill membership rows and 6,770.0 delivery-fee control total.

Assessment integrity

Gate A Fleet Maintenance, Gate B Education Enrollment and Gate C Energy Meter Readings are preserved at the response-workbook/data layer. Artifact-tool inspection found no stale B03 lesson IDs in Gate learner instructions. B/C remain physically under RETEST_ONLY_DO_NOT_OPEN. New protected reviews encode explicit full-retest assignment; targeted repair does not auto-open B/C.

Source / video audit

Lesson-mapped visuals have exact scopes: Chandoo 02:18-09:39 (facts/dimensions/star), 11:50-18:07 (relationships/filter flow), Guy in a Cube 00:00-02:29 + 06:04-08:33 (multiple facts/conformed dimensions), and Chandoo 20:19-21:32 (optional model-importance close). Microsoft Learn and Kimball references remain the technical authority; every external source has an internal lesson/practice fallback.

Render / workbook / package checks

PDFs rendered at 200 DPI: learner book 11 pages, protected practice review 5, Start Here 1, three Gate reviews 1 page each, remediation 1. Contact-sheet inspection found no visible clipping, overlap, black squares or broken glyphs. Practice/minilab spreadsheets have zero formula-error matches and were rendered for visual inspection. Fresh Mini-Lab raw controls recompute exactly; all Gate ZIPs pass CRC; preserved Gate response-workbook bytes match the baseline.

Release boundary

Not FINAL

Real Power BI Desktop relationship/filter/date-role execution is a learner-device check and is not fabricated here. Course-level Mentor regeneration, B04-B06 rebuild, whole-course routing/responsive/PWA QA and C3-entry reconciliation are still pending. Therefore B03 is a module candidate only.
