

B03 — Engineering Data Modeling

Course 2B Fast Track | 4 lessons |

Why B03 exists

Course 1 gave you analyst-level star-schema, relationships, date-table and validation skills. B03 converts those into engineering-ready contracts without wasting time reteaching report modeling.

Exact study route

- Open learner book at B03-L01.
- Use the exact visual segment only where mapped; write the required post-watch artifact.
- Open B03_ENGINEERING_DATA_MODELING_PRACTICE_RC1.xlsx and attempt only the matching lesson sheet.
- Save work in Evidence_History before opening the protected practice review.
- Close review; complete changed retry.
- Repeat through B03-L04.
- Complete FreshRoute Mini-Lab independently.
- Attempt Gate A Fleet Maintenance. Gate B/C remain protected unless explicitly assigned.

Power BI boundary

Power BI Desktop may be used for visual/model evidence, but this module must remain auditable from the workbook/design packet. Real Power BI relationship behavior is a learner-device check; this package does not fabricate it.

C3 boundary

B03 prepares dimensional contracts only. C3-02 later implements warehouse facts/dimensions, surrogate/history patterns, dbt tests/materializations and CI. Those are not hidden B03 prerequisites.
