

B04 Module QA Report - RC1

Verdict: INTERNAL QA PASS. B04 is rebuilt as a nine-lesson DA-to-DE transition module. This is not Course 2B FINAL.

Control	Result
Canonical lessons	9 (old 12 -> 9; no dropped competency)
Automated structural/data/package-preflight QA	470/470 PASS
Workbook QA via artifact_tool	14/14 PASS; 5 workbooks import; 0 formula-error matches
Learner book	21 pages; 16-stage teaching grammar + 5-part analyst->engineer transition in every lesson
Protected practice review	10 pages; saved-attempt unlock + fresh changed retry per lesson
Fresh Mini-Lab	CareFlow Clinic Warehouse; separate schema/domain from Urban Mobility; independent controls recomputed
Gate isolation	A Marketplace Sellers; B Inventory Replenishment; C Customer Success Renewals; B/C protected
Gate byte preservation	A/B/C response workbooks + fixture ZIPs exact SHA parity with audited baseline
Active videos	3 timestamped supports: L01 00:00-05:22, L04 00:36-03:19, L05 10:09-30:32
Required external media	0; book + practice remain complete fallback
PDF render QA	200-DPI learner/review/start/Gate/remediation inspection; no clipping/overlap/black glyphs observed

Defect fixed

The old Urban Mobility Mini-Lab duplicated 13 of 15 used-range practice sheets. RC1 rejects it and replaces it with the fresh CareFlow clinic domain, including provider-history ambiguity, bad provider FK, orphan event/payment and independent reconciliation controls.

Fast-track boundary

B04 teaches architectural reasoning only. dbt/materialization/SCD implementation remains C3-02; Kafka/stream implementation remains C3-06; Linux/Git/venv/container foundations remain C3-00; no Fabric tenant is required for B04 mastery.

Release blockers outside B04

B05/B06 rebuilds, full Course 2B capstone/C3 entry parity, synchronized common Mentor, whole-course responsive/PWA/backup-restore QA and final package reconciliation remain open. Therefore this module is frozen as an internal candidate, not FINAL.
