

B05 Protected Practice Review

Open only after the matching lesson attempt is saved.

Protection rule

Compare reasoning, do not copy a finished architecture. Keep the first attempt, close this review, then complete the fresh changed retry.

Review B05-L01 - Cloud data mental model: storage, compute, network and identity

Strong work demonstrates

Storage, compute, network and identity are separate; each choice points to an explicit requirement rather than a product name.

Common weak evidence

- Service names with no requirements.
- Storage/compute/network/identity collapsed.

Changed retry - review closed

Fresh transfer

Fresh case: cloud API + private finance SQL + file drop. Classify all four boundaries and one failure chain.

Repair rule

Repair only the weak competency. Do not erase the original attempt. Mark Mastered only after a changed retry + validation + own-words explanation without reopening this review.

Review B05-L02 - Fabric, OneLake, lakehouse and warehouse as one concrete example

Strong work demonstrates

Tenant/workspace/item/OneLake are not confused; lakehouse/warehouse and copy/reference choices are tied to workload, data shape, duplication and consumers.

Common weak evidence

- OneLake treated as universal permission.
- Lakehouse/warehouse selected as “best” without context.

Changed retry - review closed

Fresh transfer

Fresh case: telemetry files + finance SQL serving + large media archive. Choose lakehouse/warehouse/reference-copy patterns and reject one option.

Repair rule

Repair only the weak competency. Do not erase the original attempt. Mark Mastered only after a changed retry + validation + own-words explanation without reopening this review.

Review B05-L03 - Permissions, governance and private-source connection boundaries

Strong work demonstrates

Workspace/item/data access, identity and network are separated; least privilege is defended; private-source connectivity is not invented for cloud SaaS sources.

Common weak evidence

- Contributor/Admin by convenience.
- Personal credential or gateway assigned without boundary reasoning.

Changed retry - review closed

Fresh transfer

Fresh case: payroll private DB + CRM SaaS + external contractor. Design least privilege and private-source connectivity.

Repair rule

Repair only the weak competency. Do not erase the original attempt. Mark Mastered only after a changed retry + validation + own-words explanation without reopening this review.

Review B05-L04 - Freshness, monitoring and failure ownership

Strong work demonstrates

Freshness target, detection signal, owner, recovery, post-recovery validation and consumer communication are all present; green run alone is not accepted.

Common weak evidence

- Job green = data trusted.
- No owner/post-recovery validation.

Changed retry - review closed

Fresh transfer

Fresh case: supplier file is 8 hours late while refresh shows green. Decide consumer status, owner, recovery and proof.

Repair rule

Repair only the weak competency. Do not erase the original attempt. Mark Mastered only after a changed retry + validation + own-words explanation without reopening this review.

Review B05-L05 - Analyst-to-engineer platform collaboration and handoff

Strong work demonstrates

Handoff states source/use/grain or definition, freshness, access, owner, failure expectations, acceptance evidence, limitations and downstream impact.

Common weak evidence

- “Real time and secure” remains unmeasurable.
- No acceptance/limitation/impact clause.

Changed retry - review closed

Fresh transfer

Fresh case: stakeholder changes daily churn output to hourly. Update the handoff and list impact questions before promising.

Repair rule

Repair only the weak competency. Do not erase the original attempt. Mark Mastered only after a changed retry + validation + own-words explanation without reopening this review.
