

B05 - Cloud Platform Essentials

Course 2B Fast Track | 5 lessons |

Why B05 exists

Course 1 taught reporting/share/refresh concepts. B05 converts them into cloud platform boundary, access, freshness, monitoring and handoff reasoning without requiring a paid tenant.

Exact study route

- Open B05 learner book at B05-L01.
- Use only the mapped source/visual segment; complete the stated post-watch action.
- Open B05_CLOUD_PLATFORM_PRACTICE_RC1.xlsx and attempt only the matching lesson sheet.
- Save genuine work in Evidence_History before opening the protected practice review.
- Close review and complete the changed retry.
- Repeat through B05-L05.
- Complete HomeFix Field Service Mini-Lab independently.
- Attempt Gate A Manufacturing Quality independently. Gate B/C stay protected unless explicitly assigned.

No-tenant boundary

No paid/live Fabric tenant is required. A tenant can be used later for optional learner-device evidence, but inability to obtain one cannot block this Bridge.

Course 3 boundary

C3-00 teaches environment/configuration/secrets implementation. C3-07 teaches actual Fabric/cloud implementation. B05 proves reasoning and handoff readiness only.
