

B06 Final Gate Rules

Protected Course 3 entry assessment | evidence floors + critical blockers

Before starting

Read this rules document only. Do not open learner-book solution guidance, capstone protected review, Gate review, walkthroughs or AI solving during the active Gate. Normal syntax/reference documentation is allowed only if it does not reveal the case solution.

Required evidence bundle

Gate case files + source inventory/grain inference; SQL workspace and controls; Python pipeline + validation/run/recovery evidence; protected response workbook; independent reconciliation; concise architecture/failure/recovery defense.

Scoring

Area	Minimum
Advanced SQL	3/4
Python automation	3/4
Data modeling	3/4
Warehousing	3/4
Data quality	3/4
Independent analysis	3/4
Cloud/Fabric	2/4
Professional ownership	2/4

Routing and blockers

Gate route

Start with Gate A. Save the full attempt. Open only Gate A review afterward. Narrow weakness -> targeted repair + changed micro-retest; stay on A unless the review explicitly assigns a fresh full Gate. Broad/critical instability after A -> Gate B only when assigned. Broad/critical instability after B -> Gate C only when assigned. A failed attempt never auto-opens B/C.

Automatic blockers

Silent/unreconciled loss or duplication; unsafe publish after critical quality failure; historical key/history logic answers the case incorrectly; rerun duplicates/destroys trusted state; hard access/network/freshness constraint ignored; failure cannot be detected/recovered/explained; protected attempt contaminated by solution copying.

PASS

Final Gate PASS is necessary but not sufficient by itself. Complete B06_C3_ENTRY_READINESS_SCORECARD_RC1.xlsx. C3 ENTRY READY requires every floor plus Final Gate PASS and no unresolved critical blocker.
