

B06 Module QA Report - RC1

Verdict: INTERNAL QA PASS. B06 is rebuilt as the final two-lesson Bridge capstone and Course 3 entry module. This is not Course 2B FINAL.

Control	Result
Canonical lessons	2/2 - integrated capstone + C3 entry/handoff
Structural/content QA	192/192 PASS
Workbook QA via artifact_tool	13/13 PASS; five workbooks imported; zero formula-error matches
Readiness formula simulation	All floors + Gate PASS -> C3 ENTRY READY; one SQL/Python-class floor below minimum -> NOT READY
Practice controls	Home Services controls recomputed: 72 orders, 54 completed, 144 item rows, 271 events, 1 orphan event, one duplicate history pair
Gate control recomputation	38/38 PASS across Retail Orders / Support Tickets / Subscription Billing
Gate byte preservation	A/B/C case ZIPs + response workbooks exact SHA parity with audited baseline
Assessment protection	A first; B/C sealed unless explicit full reassessment is assigned; critical failures block pass
C3 entry rule	Final Gate PASS + eight competency floors; no completion-percentage shortcut
C3-00 boundary	12 incoming foundations explicitly marked taught in C3, not hidden Bridge prerequisites
External media	0 new required videos in B06; deliberate synthesis policy
PDF render QA	200-DPI learner/brief/review/final-gate/Gate-review/remediation/start inspection; no clipping/overlap/black glyphs observed

Important boundary

Passing B06 means ready to begin Course 3. It does not mean job-ready Data Engineer. Linux/WSL2, shell, Git, venv/dependency pinning, packages/project structure, config/secrets, logging, testing, CLI, Docker and idempotence/runbooks remain C3-00 teaching topics.

Course-level blockers still open

Common five-course Mentor generation/synchronization, whole-course 38-lesson route simulation, C1 -> C2B prerequisite parity, C2B -> C3 entry parity, full source/video registry reconciliation, responsive/PWA/theme/backup-restore/runtime QA, whole-course package/hash audit and COURSE_2B_HANDOFF.json remain open. Therefore B06 is only a module candidate.
