

B01 Gate C Protected Review — Subscription Billing

Protected post-attempt diagnostic review · Astra RC4

Unlock rule

Open only after the saved genuine Gate C attempt and evidence. During the protected attempt, the teaching book, this review, tutorials and AI solving are closed. If the attempt was contaminated, preserve it and use a fresh assigned assessment path.

Objective controls

Control	Expected
invoice rows	24
line rows	48
adjustment rows	13
payment rows	15
paid invoices	14
paid invoice value	35,300.00
orphan payments	1
duplicate business adjustments	1

What the controls do — and do not — prove

Matching these values is necessary but not sufficient. The learner must still defend input/output grain, match cardinality, business population, deterministic window/time rules, independent validation and maintainable handoff.

Failure diagnosis

Diagnostic trap

Invoices -> lines expands 24 invoices to 48 line rows; adjustments are a separate child grain.

Diagnostic trap

For invoices that have adjustments, safe line value is 12,100; joining lines directly to adjustment rows raises the summed line value to 19,800 — 7,700 inflation.

Diagnostic trap

Valid-invoice payments total 35,300; including orphan invoice_id 999 raises received cash to 35,800. Population definition must be explicit.

Competency decision

PASS requires every critical competency at least 3/4 with no unresolved grain/cardinality/validation failure. A narrow weakness routes to targeted repair. Gate B/C never open automatically; they require the failed/developing prior Gate, this protected review, repair evidence, changed micro-proof and explicit reassignment.

Repair proof and changed retry

Close this review before the retry. Rebuild only the weak competency on a changed slice/definition. Save: the original failed evidence, the repair note, the changed micro-proof, independent control output and an explanation of why the repair would catch the prior failure.

Fresh changed task

Changed micro-proof: use a different invoice month/segment. Aggregate lines and adjustments independently to invoice grain before combining them; reconcile invoice value and valid payment population through separate paths.

Next route

A clean assigned Gate pass ends B01. If still Developing, follow the protected remediation state machine; there is no automatic later Gate.
