

B03 Protected Mastery Review

Open only after a genuine attempt - diagnose, close, changed retry

Protected review - saved genuine attempt required

Diagnose your saved attempt. Do not copy the review as a submission. Close it before the changed retry.

Objective controls - Parcel Delivery

Control	Expected
Customers	24
Services	4
Shipments	72
Shipment events	216
Monthly target rows	12
Customer-tag rows	28
Shipment booked revenue	26571.60
Distinct shipments represented in events	72
Naive shipment-event joined rows	216
Naive joined booked revenue	79714.80

What the controls mean

- Shipment events are exactly lower-grain rows relative to shipments in this fixture. Summing shipment revenue after the raw event join triples 26571.60 to 79714.80.
- customer_tags has multi-tag membership for some customers. That is a legitimate bridge pattern, not a reason to put duplicate customer rows in the Customer dimension.
- monthly_targets is month-region grain, so a direct transaction-level join would repeat target values. Compare at a compatible aggregate grain.

Changed fresh retry - FreshRoute Mini-Lab

- Close this review and build the same contracts for FreshRoute: 4 cities, 6 restaurants, 10 couriers, 18 courier-skill memberships, 40 deliveries, 120 delivery events and 8 weekly city targets.
- The delivery fee control is 6770.00. A raw delivery-event join produces 120 rows and would inflate delivery fees to 20310.00 if summed at event grain.
- Keep three date roles explicit and treat courier_skills as a membership bridge. City is a conformed-dimension candidate across delivery and target facts.

Mastery decision

Ready when you can transfer the grain/key/bridge/date/reconciliation method without the review open and explain why the rejected flat model fails.
