

# B03 Protected Practice Review

Open only after the matching lesson attempt is saved.

## Protection rule

This review diagnoses reasoning; it does not provide a paste-ready finished model. Keep the failed/partial attempt, close the review, then solve a changed retry.

## Review B03-L01 — Analyst semantic model to engineering dimensional contract

### Strong work demonstrates

Process and grain are declared before table roles; Shipment/Event/Target facts remain separate and all measures fit their grain.

### Compare against your saved attempt

- Every fact has a one-row sentence.
- No different-grain measures are mixed.
- Dimensions are chosen after grain, not before.

### Changed retry — review closed

### Fresh transfer

Design Ticket / TicketEvent / MonthlyTeamTarget grains on a fresh support case.

### Repair rule

Repair only the named weak competency. Do not erase the original attempt. Mastery requires the changed retry without reopening this review.

## Review B03-L02 — Key integrity, relationship paths and many-to-many bridges

### Strong work demonstrates

One-side uniqueness, many-side FK meaning and unmatched-key policy are explicit; customer\_tags is a legitimate membership bridge; fan-out is named.

### Compare against your saved attempt

- Dimension one-side keys are unique.
- Bridge grain is real membership.
- Fan-out risk is quantified/explained; no DISTINCT repair.

### Changed retry — review closed

#### Fresh transfer

Design Employee / Skill / EmployeeSkill bridge and write the cardinality contract.

### Repair rule

Repair only the named weak competency. Do not erase the original attempt. Mastery requires the changed retry without reopening this review.

## Review B03-L03 — Multiple grains, date roles and conformed dimensions

### Strong work demonstrates

Separate facts align through compatible conformed dimensions; date roles are named; no direct fact-to-fact shortcut is required.

### Compare against your saved attempt

- Facts query independently.
- Conformed dimensions have compatible definitions.
- Date roles are explicit.
- Higher-grain targets are not expanded to transactions.

### Changed retry — review closed

#### Fresh transfer

Design Orders / WebEvents / WeeklyTargets with shared Date/Customer/Region only where valid.

### Repair rule

Repair only the named weak competency. Do not erase the original attempt. Mastery requires the changed retry without reopening this review.

## Review B03-L04 — Model reconciliation and engineer handoff

### Strong work demonstrates

Raw controls reconcile; assumptions/owners and rejected alternatives are explicit; handoff is implementable without hidden PBIX knowledge.

### Compare against your saved attempt

- Source row/control totals recorded before model trust.
- Key/unmatched issues remain visible.
- Assumption owner recorded.
- Rejected alternative names a concrete failure.

### Changed retry — review closed

#### Fresh transfer

Audit a fresh model diagram missing grain/key/control notes and write the missing handoff requirements.

### Repair rule

Repair only the named weak competency. Do not erase the original attempt. Mastery requires the changed retry without reopening this review.
