

B04 Warehousing & Data Quality Foundations

Strong teaching preserved - mastery and Gate evidence deepened

Open in this order

1) Existing 9-lesson learner book -> 2) matching workbook practice -> 3) Quick Revision -> 4) non-gating closed-book Practical Mastery Check -> 5) protected review after a saved genuine attempt -> 6) changed retry -> 7) CareFlow Mini-Lab -> 8) Gate A.

Why the learner book is preserved

The RC1 learner book already uses the full Astra learning loop and is self-sufficient without video. Checkpoint44 therefore preserves it byte-for-byte and deepens only the weaker mastery and Gate layer.

What RC4 adds

Quick Revision, a separate non-gating mastery check, a protected mastery review with changed retry, and deeper Gate A/B/C reviews based on the actual hidden warehouse/data-quality evidence.

Gate rule

A clean Gate A pass ends B04. Gate B/C stay remediation-only and fresh. The existing saved failed attempt -> protected review -> repair evidence -> changed micro-proof -> explicit reassignment state machine is unchanged.

Runtime boundary

This package statically validates files, controls, source mappings, PDF layout and archive integrity. It does not claim a Fabric tenant, warehouse engine, streaming service or learner-device runtime was executed.
