

B04 - Warehousing & Data Quality Foundations

Course 2B fast-track | 9 lessons | Internal QA RC1

Why this module exists

Course 1 already taught analyst-side cleaning/modeling/validation. B04 changes the question from "is my result correct?" to "what system boundary, history rule, layer contract, quality action and recovery evidence makes the result reliably reproducible?"

Open exactly this

- 1) B04_WAREHOUSING_DATA_QUALITY_FOUNDATIONS_LEARNER_BOOK_RC1.pdf -> B04-L01.
- 2) B04_WAREHOUSING_DATA_QUALITY_PRACTICE_RC1.xlsx -> Workload_Contract.
- 3) Keep B04_WAREHOUSING_DATA_QUALITY_PRACTICE_REVIEW_PROTECTED_RC1.pdf closed until your attempt is saved.

Normal lesson loop

Book -> follow once -> reproduce/change/debug in matching sheet -> save attempt -> protected review -> close review -> fresh changed retry -> validate -> teach back -> save evidence.

After lesson 9

Complete B04_CAREFLOW_WAREHOUSE_MINI_LAB_RC1.xlsx using B04_CAREFLOW_MINILAB_DATA_RC1.zip. This is a fresh clinic domain; the rejected old Mini-Lab duplicated the practice workbook and is not part of RC1. After Mini-Lab pass, attempt Gate A independently.

Protected assessment route

Gate A first. Targeted repair does not unlock Gate B. Gate B/C are fresh full retests and appear only when an explicit reassessment route assigns them.

If stuck

Return only to the named weak contract: workload boundary, storage fit, history/key rule, transform boundary, layer contract, latency, lineage/ownership, quality severity/reconciliation, or recovery runbook. Do not restart the module.

Course 3 boundary

No dbt implementation, Kafka implementation, paid cloud tenant, Linux/Git/venv/container mastery is hidden here. Those are taught in Course 3 at the correct stage.

Ready to continue when

Nine lesson evidence packets + Fresh CareFlow Mini-Lab PASS + one protected full Gate PASS + no unresolved critical failure.
