

B05 Practical Mastery Check

Closed-book cloud-platform transfer - non-gating

Non-gating closed-book mastery check

Save a genuine attempt before opening the protected review. This check is visible evidence only and does not change Gate A/B/C state.

Scenario - Distribution platform

- Classify each source/requirement as storage, compute, network/connectivity or identity concern before choosing a product.
- Choose lakehouse/warehouse/reference/copy patterns for structured operational extracts, large object files and governed reporting. Defend one rejected alternative.
- For one private source and two cloud sources, state exactly where a gateway/private bridge is or is not needed.
- Define minimum access for engineering, analysts, managers and a pipeline identity. Separate workspace/item control from data read/write scope.
- Create freshness/monitoring contracts for one 5-minute flow, one hourly flow and one daily flow. Include tolerance and stale-data communication.
- For an outage, token expiry and accidental broad permission, write signal -> owner -> recovery -> post-recovery validation -> consumer impact.
- Write the analyst-to-engineer handoff and acceptance tests.

Evidence to save

- Four-box architecture map.
- Source-by-source connectivity decision.
- Least-privilege access matrix.
- Freshness/SLA table.
- Incident ownership/recovery evidence.
- Handoff with acceptance tests and limitations.
- Rejected alternative and reason.
