

B05 Cloud Platform Essentials

Strong teaching preserved - architecture evidence deepened

Open in this order

Existing 5-lesson learner book -> matching practice -> Quick Revision -> non-gating Practical Mastery Check -> protected review after a saved genuine attempt -> changed retry -> HomeFix Mini-Lab -> Gate A.

What stays authoritative

The RC1 learner book already teaches the full bridge loop from platform mental model through access, freshness, monitoring and handoff. RC4 preserves those bytes and deepens only the mastery/Gate layer.

Gate discipline

Gate A remains the normal terminal Gate on a clean pass. Gate B/C remain sealed remediation-only reassessments. No new mastery check can unlock or block them.

Runtime boundary

No live Fabric tenant, gateway, workspace security configuration or capacity behavior is claimed by this static package. Decisions are grounded in current official documentation and case evidence.
