

B06 Bridge Capstone & C3 Entry

Evidence floors, protected Final Gate and honest C3 boundary

Open in this order

B06 learner book -> guided Home Services capstone evidence -> Quick Revision -> non-gating Bridge Mastery Check -> protected changed retry -> B06-L02 -> protected Final Gate A -> readiness scorecard. Gate B/C only if explicitly assigned.

Locked C3 entry rule

Final Gate PASS is necessary but not sufficient. C3 ENTRY READY requires Final Gate PASS, every readiness floor, and no unresolved critical blocker. A high average cannot compensate for a failed critical area.

What RC4 changes

The guided capstone, Final Gate rules, readiness scorecard and strong protected capstone review stay authoritative. RC4 adds a separate non-gating synthesis check and deeper Gate A/B/C reviews that show the actual fan-out/history/orphan/platform traps hidden in the fresh cases.

C3 boundary

Linux/WSL, Git, venv/dependency pinning, project structure, config/secrets, logging, testing, CLI, Docker and runbooks remain C3-00 teaching. They are not hidden B06 prerequisites.
